

Every year, our emergency departments treat thousands of sick animals who have eaten something harmful.

So we thought we'd share a list of some of a few of those things best kept away from family pets.

Please take a moment to glance over these to help ensure your pets are not munching on something that may harm them.

At ACCESS (Advanced Critical Care, Emergency, and Specialty Services), our emergency trained doctors, board-certified veterinary specialists, and veterinary technicians provide diagnostic evaluation and treatment for pets. This is supported with the type of high-level 24-hour care only available in a state-of-the-art animal hospital where interconnected technology enables real-time collaboration between medical teams.

Perhaps it's something she ate?

Dogs	Cats	Exotic Pets	Danger
■	■	■	Alcohol
